No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N Geneseq 19Jun03:*

The present sequence encodes a human platelet-derived growth factor C (PDGP-C) (formally designated VBGP-F) fragment. PDGP-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGP-C receptor.

CC PDGP-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGP-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGP-C polypeptide can be enzymatically processed to generate the active truncated form of PDGP-C and used to regulate the receptor-binding specificity of PDGP-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation.

CC pDGP-C antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in amammal. Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of PDGF-C antagonists can also be used to inhibit tissue cremodalling during invasion of tumour cells into a normal population of especially found in the lung, kidney or liver.
                                                                                                                                                                                                                                                                                               Novel DNA encoding PDGF-C useful to stimulate or enhance proliferation, differentiation, growth and motility of cells expressing the PDGF-C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has crandothelial cell growth factor-E (VEGF-E) polypeptide which has crandothelial cell growth factor-E (VEGF-E) can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially commanders in wammals, especially commanders in mammals, especially commanders in wammals, especially commanders in mammals, especially can be combined with a carrier in pharmaceutical compositions, which can be administered to treat disorders as above. VEGF-E can be used to creat angiogenic disorders in mammals (especially humans) e.g. cancer or age-related macular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also useful to detect VEGF-E polypeptide, especially to diagnose cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation, by contacting the antibody with a tissue sample and detecting formation of an antibody-VEGF-E polypeptide complex. Polynucleotides encoding VEGF-E can be used to diagnose cardiovascular and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E gene expression in the mammals, by detecting abnormally high or low VEGF-E gene expression in the susceptibility to a disease related to a mutated form of VEGF-E or

                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of human vascular endothelial cell growth factors. B (WBGF-B, also referred to as PRO:200), and the polymucleotide sequence encoding it. VBGF-E is related to VBGF and bone morphogenetic protein I. VBGF-E is useful in wound repgir, as well as in the generation and regeneration of rissue. The sequences of the invention are useful for diagnosing or treating cardiovascular, endothelial or angiogenic disorders such as cancer, diabbetes mellitus, cardiac hypertrophy and atherosclerosis. The polymucleotide encoding VBGF-E is useful in the gene therapy of such disorders. The present sequence encodes human VBGF-E.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulartion disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33391 to AAZ34338, and AAY41685 to AAY41774 represent polymucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64 GAATTATTACTGTGTGTACTAATGGAAGTATTCACAGCCCAAGGTTTCCTCATACTTATC

                                                                                      AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polynechides and polypeptides have cytostatic activity. The PRO polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCATTITICIGGCCAGGITGICICCTGGITAAACGCIGIGGGGAACTGIGCCTGITGIC 783

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GAATTATTACTGTGTCTACTAATGGAAGTATTCACAGCCCAAGGTTTCCTCATACTTATC 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ATCC 209653) isolated from a human glioma cell line Gel CDNA library using probes (see AAA88523-26) based on an expressed sequence tag (see AAA88523) identified on the basis of homology to vascular endothelial growth factor (VEGF). The clone contains a single open reading frame encoding a 345-amino acid protein (see AAB19578) designated PRO200 or VEGF.E. The isolated CDNA can be used in the recombinant production of PRO200 (VEGF.E). The invention relates to the use of PRO polypeptides, including PRO200, to delay, prevent or rescue retinal cells such as retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal ganglion cells, amacrine cells, amacrine cells, amacrine cells, and supportive cells (including Mueller cells and pigment epithelial cells) from injury and degradation. The retinal cells are preferably photoreceptors and photoreceptor cell injury or cells are preferably photoreceptors and photoreceptor cell injury or cells are preferably photoreceptors and photoreceptor cell injury or

                                                                                                                          The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or anglogenic disorder in mammals by modulating cell proliferation, anglogenic disorder in mammals by and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or anglogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors associated with decreased PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB2438 to AAB4438 to AAB4435 represent nucleotide and protein sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTACGTTTGAAGAAGATTTGGGCTTGAAGACCCAGAAGATGACATATGCAAGTATGATT

AAS1244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cartilage, the proliferation of inner ear utricular supporting cells or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is one of seventeen nucleic acids encoding PRO polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or antigonic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, Reynaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodontal diseases. They are also used to stimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or angiogenic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CAAGAAATACGGTCTTGGTATGGAGATTAGTAGCAGTAGGAGAAAATGTATGGATACAAC

These proteins, their coding sequences and antibodies can be used in the treatment of immune-related diseases, including systemic lupus erythematosus, rheumatoid arthritis, thyroiditis, immune-mediated renal disease, demyelinating diseases such as multiple sclerosis, hepatobiliary diseases including primary biliary cirrhosis, inflammatory bowel disease, immune-mediated skin diseases such as psoriasis, allergic diseases including asthma, immunologic diseases of the lung, transplantation associated diseases and infectious diseases such as HIV and hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        426

PT New isolated nucleic acid for producing a PRO polypeptide, analyzing genetic disorders and treating cardiovascular, endothelial or angiogenic disorders unch as atherosclerosis, wounds or cancer.

XX Claim S8; Fig 21A-B; 293pp; English.

XX Claim S8, Fig 21A-B; 293pp; English.

XX Claim S8, Fig 21A-B; 293pp; English.

XX Crhe invention relates to novel human angiogenesis-associated proteins designated PRO proteins (AAB3104-B53097), and to nucleic acids encoding PRO proteins (AAB3104-B53097), and to nucleic acids encoding PRO protein, against a proportion of a PRO protein, against a protein, fusion protein, and compounds which inhibit the expression of a PRO protein, additionally encompasses methods of identifying modulators of PRO protein, additionally encompasses methods of identifying modulators of PRO additionally encompasses methods of identifying modulators of PRO additionally encompasses methods of identifying modulators of PRO additionally encompasses methods of identifying modulators of PRO additionally encompasses methods of identifying modulators of PRO additionally encompasses methods of identifying modulators of PRO additional triasue; treating a cardiovascular, endothelial or angiogenic disorder via the administration of a PRO protein, PRO protein, PRO administration of a PRO protein, an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist procession of an entagonist production of PRO proteins, and an entagonist production of PRO proteins, and pure and an entagonist production of PRO proteins, and pure and penses encoding PRO proteins, to analyse genes encoding PRO proteins, to analyse genes encoding PRO proteins, to analyse

for modulating biological activities of cells expressing PRO polypeptides, and for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TMF)-lapha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ACA03803-ACA03877 represent cDNAs encoding the human PRO polypeptides of the invention.

Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACAGCTGCACACCTCGTAACTTCTCAGTGTCCATAAGGGAAGAACTAAAGAGAACGGATA 1086

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gao W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel human PRO polypeptides, and the polynuclectide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Beresini M, DeForge L, Desnoyers L, Filvaroff E, G. New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer

# Claim 2; Fig 285; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited cunder American Type Culture Collection (ATC) accession number in a list given in the specification. Also included are vectors and host calls for producing PRO proteins, PRO fusion proteins, anti-PRO attibodies, PRO extracellular domains and mature sequences, methods of detecting PRO proteins, methods for stimulating the release of TNF-alpha (tumour necrosis factor alpha) from human blood, and the proliferation of differentiation of fondrocyte cells, the comparation of, or gene expression in pericyte cells, the release or proteoglycans from cartilage, proliferation of finer ear urticular cultor proliferation of mononuclear cells, the release of proliferation of endothelial cells, a method for modulating the uptake of glucose or free fatty acid (FFA) by skeletal muscle cells, cor the differentiation of adipocyte cells, a method for modulating the proliferation of adipocyte cells, a method for inhibiting the bluding of A-pepting to factor VIIA, or the differentiation of adipocyte cells, a method for detecting the proliferation of adipocyte cells, a method for detecting the proliferation of adipocyte cells, a method for detecting cor the differentiation of adipocyte cells, a method for detecting cor presence of a tumour in a mammal and an oligonucleotide probe derived for multiples are useful for treating inflammatory diseases, organ collypeptides are useful for treating inflammatory diseases, organ promature aging, AIDS (acquired inpury, infertility, birth defects, or premature aging, AIDS (acquired inpury, infertility, birth defects) or premature aging, AIDS (acquired inpurs).

Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer treatments

Claim 2; Fig 285; 659pp; English

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in collypeptides are useful in detecting PRO polypeptides in a sample, in collypeptide abloactive molecule to a cell expressing a PRO polypeptide. PRO polypeptide and propertion in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus conseful for treating cardiac insufficiency disorders. PRO156, and PRO136, PRO943, PRO928, PRO926, PRO1366 and PRO1387 induce c-fos in endothelial growth, and PRO536, PRO943, PRO928, PRO926, PRO943, PRO926, PRO1386 or PRO536, and artagonist of this polypeptide are useful for treating conditions or disorders where angiogenesis would be charting cancerous tumours. PRO821 inhibits vascular candothelial growth factor (VEGF) stimulated proliferation of endothelial colls and is thus useful for inhibiting andothelial cell growth. PRO926, PRO1168, PRO1184 and PRO1375 stimulated proliferation of calls which would be beneficial in inhibiting tumour growth. PRO826, PRO1168, PRO1184, PRO91346 and PRO1375 stimulated proliferation of catinal neurons cells (PRO9132) is also enhances survival (por infared proliferation of descreased mesangial cells) and therefore are useful for treating kidney disorders associated with dermatitis, herpetiformis or crohn's disease. PRO9110, PRO944, PRO91312, PRO9193 and proliferation and/or redifferentiation of chondrocytes in culture and enterpress and are thus useful for treating sports inhighties, and are thuse associated with dermatitis, herpetelformis or crohn's disease. PRO9110, proved and profile and profil sequence encodes a novel human PRO protein.
